

INSULATED PLENUM IN ABS WITH ADJUSTABLE CONNECTOR

TE-PAB
SEIRES

MATERIALS
MANUFACTURING DIMENSIONS

The insulated TE-PAB series plenum is a special patented model in ABS class V0, with quick connector for flexible ducts, adjustable in height and complete of regulation damper. Its particular design, allows to rapidly fit with a simple action the flexible ducts of different diameters blocking them with special clips. The TE-PAB plenum is an alternative to the traditional ones in galvanized steel sheets and thanks to the regulation of the connector, enables the use of one single type of plenum for grille size. The plenum disposes of a butterfly damper so as to easily adapt to the size of the connector previously chosen. The presence of guides for the use of clips for fitting to walls or ceilings and its reduced weight, make the TE-PAB an ideal product for every type of installation.

Materials

Standard Plenum TE-PAB: In ABS. Regulation damper: In abs.
